

3/4 INCH

SHOOTER ATTACK/ BOMB GLASS

Armoured One is a law enforcement - based company that is one of the nation's leading experts in protection from active shooter attacks.

Subject matter experts designed Armoured One's Shooter Attack Glass to hold its integrity by being stronger and holding together for longer. We pride ourselves on using evidence-based strategies and proven techniques to offer the best solutions to protect against an active shooter attack.

Stronger Security for Better Protection.

Armoured One's 3/4-inch tactical security glass AOTSG1216L is shooter/attack/bomb/bullet resistant. This glass carries stronger security than our thinner security glass. This type of glass is a great option for new construction or remodel projects, where glaziers can use standard sized vision kits and drop our AOTSG1216L right into place. Our glass, when placed in a recommended location, will slow down, or deter an attack who is trying to gain entry through the glass with force or a gun. AOTSG1216L is an approved product that meets all standard building requirements for safety on non-rated applications.

USES

We recommend this glass for interior locations, such as second set of vestibule doors, classroom interior doors, office doors and other interior areas where fire rated glass is not required.

SPECS

- Thickness: 3/4"
- Glass Weight: 10 lbs. sq/ft
- Construction: Proprietary
- Maximum Size: 72" X 96"
- Warranty: 10 Year Limited

SHOOTER ATTACK TEST

AOTSG1216L is a Class 6 Shooter Attack Test by FILTI Testing and Development. Every Shooter Attack Test is observed by UL. During this test, the glass is shot 10 times with an AR15 .223 round, and then hit with a 100 lb. ram where the bullets penetrate the glass. In total, this glass is hit 12 times by a 100 lb. ram. If the 6-inch ram head penetrates the glass before the completion of the test level, it is considered a failure. This is the only test method where glass is shot 10 times by a rifle and then struck by a measurable amount of force to gauge the strength of products after being shot. This test was created to not only protect the people behind the glass, but also protect decision makers from liability.
