

## 3/8 INCH

### SHOOTER ATTACK/ BOMB GLASS

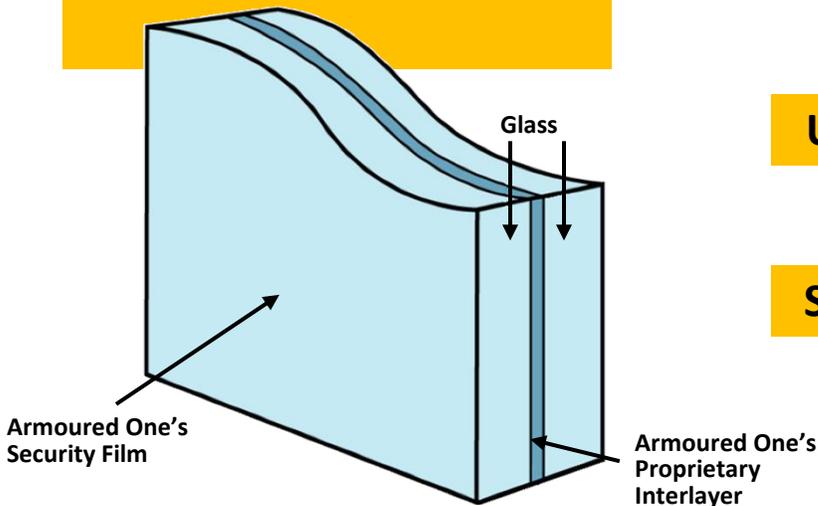

Armoured One is a law enforcement - based company that is one of the nation's leading experts in protection from active shooter attacks.

Subject matter experts designed Armoured One's Shooter Attack Glass to hold its integrity by being stronger and holding together for longer. We pride ourselves on using evidence-based strategies and proven techniques to offer the best solutions to protect against an active shooter attack.

### Proprietary Shooter Attack Solutions.

Armoured One's 3/8" tactical security glass is the next step up from our most popular 1/4" security glass option. It utilizes Armoured One's proprietary interlayer and security film but has the additional strength from the thicker glass. We recommend this glass for new or remodel applications where vision kits can accommodate thicker glass above the 1/4" option. AOTSG616L can be combined with our one-inch insulated units when required and come in a variety of options. Our glass, when placed in a recommended location, will slow down, or deter an attack who is trying to gain entry through the glass with force or a gun.

### USES

We recommend this glass for interior locations, such as second set of vestibule doors, classroom interior doors, office doors and other interior areas where fire rated glass is not required.

### SPECS

- Thickness: 3/8"
- Glass Weight: 5 lbs. sq/ft
- Construction: Proprietary
- Maximum Size: 72" X 96"
- Warranty: 10 Year Limited

### SHOOTER ATTACK TEST

AOTSG616L is a Class 6 Shooter Attack Test by FILTI Testing and Development. Every Shooter Attack Test is observed by UL. During this test, the glass is shot 10 times with an AR15 .223 round, and then hit with a 100 lb. ram where the bullets penetrate the glass. In total, this glass is hit 12 times by a 100 lb. ram. If the 6-inch ram head penetrates the glass before the completion of the test level, it is considered a failure. This is the only test method where glass is shot 10 times by a rifle and then struck by a measurable amount of force to gauge the strength of products after being shot. This test was created to not only protect the people behind the glass, but also protect decision makers from liability.
